# FORTY-THIRD ANNUAL REPORT

OF THE

BOARD OF SUPERINTENDENCE OF THE  
DUBLIN HOSPITALS ;

WITH

APPENDICES FOR THE YEAR 1900-1901.

TO HIS EXCELLENCY THE RIGHT HON. GEORGE  
HENRY, EARL CADOGAN, K.G.,

*Lord Lieutenant and General Governor of Ireland.*

35, Dawson-street,

1st July, 1901.

MAY IT PLEASE YOUR EXCELLENCY :

We have the honour to submit this our Forty-third Annual Report on the City of Dublin Hospitals under our supervision, in accordance with statute 19 & 20 Vic., cap. 110, entitled "The Dublin Hospitals Regulation Act" for Your Excellency's information and subsequent presentation to Parliament.

During the year ending 31st March, 1901, we have inspected as heretofore, without previous notice to the officials, the several hospitals in the city which receive grants from Parliament.

These are :—

1. Westmorland Lock Hospital.
2. The House of Industry Hospitals, viz :—
  - a. Hardwicke Fever Hospital.
  - b. Whitworth Medical Hospital.
  - c. Richmond Surgical Hospital.
3. Steevens's Hospital.
4. Meath Hospital and County Dublin Infirmary.
5. Cork-street Fever Hospital.
6. Rotunda Lying-in Hospital.
7. Coombe Lying-in Hospital.
8. The Royal Victoria Eye and Ear Hospital ; and
9. Royal Hospital for Incurables, which receives a portion of the Concordatum Fund.

We are glad to report that, during the period under consideration, no culpable irregularity on the part of nurses or attendants was brought under our notice, nor have we had any serious or well-founded complaint from the patients.

While we are gratified to speak, with cordial approval, of the work done in these hospitals, we regret to note that the interest taken, as indicated by the regularity of the attendances of the Governing Bodies at their several meetings, leaves, in some cases, much to be desired. It is our opinion that the efficiency of these hospitals would be enhanced if more frequent visits were made by the Governors at irregular times.

The practice of holding wakes, condemned by the highest religious and medical authorities, has been a potent factor in the dissemination of disease, and a consequent strain on hospital accommodation. We are of opinion that, to a great extent, this evil might be remedied if, in the several parishes, suitable mortuaries were provided wherein the remains might be deposited as soon as possible after death, and there retained until removal for burial. We believe if such facilities were afforded, they would be availed of by a large number of the more respectable tenement holders.

As regards the classes of patients to whom hospital accommodation should be devoted, we are of opinion that some arrangement might be made for the admission of pay patients, and the allocation of the money received. While we recognise that under existing circumstances it is not possible to exclude from hospital treatment patients who are not, in a financial sense, legitimate objects of charity, we feel that discrimination should be exercised to ensure that the funds provided for charitable relief should not be spent on persons who are competent to pay for such advantages.

To construct a scheme which may be acceptable to all hospital administrators will, no doubt, require time and deliberation.

We are glad to observe that the Medical Staff of each hospital (with the exception of one) is now represented on the Governing Boards by some of its members, an arrangement, in our opinion, which conduces to harmonious working and to efficient administration.

We wish again to impress on the authorities the importance of having properly qualified cooks to prepare invalid cooking for special cases.

We regret to observe that in several hospitals scarcely sufficient care is bestowed on this subject, which is frequently even more important than the administration of medicine.

Other recommendations, in regard to hospital improvements, we are glad to say have been adopted by the Governing Bodies as far as practicable, and we therefore do not propose to go through the same details in this Report.

The various statistical and other tables in Appendixes will be found similar in character to those that have hitherto appeared in regular annual sequence, but at the same time indicative of the relative changes and results in the operation of the different

institutions. It will be seen that the number of patients admitted to general hospitals and the number discharged is considerable in proportion to the average number of inmates, which shows that the average period under treatment is not excessive. In some the mortality has been rather high; but this does not indicate inefficiency, for a general hospital which has no mortality would imply the admission of patients under conditions which hardly justify hospital treatment.

On the 1st of April, 1900, there remained 921 patients in these hospitals under the supervision of our Board.

The number admitted during the year was 11,601, making the whole number under treatment 12,522, of whom 11,611 left the wards either cured or relieved, or were discharged for other causes, and 480 died.

Nine hundred and eleven remained under treatment in these hospitals on the 31st March, 1901.

Exclusive of incurables, the mortality was 3.93 per cent. on 11,118 cases—estimated on the numbers who have been discharged or who have died, or whose cases have consequently been treated to a termination.

The total daily average number of beds occupied in these hospitals throughout the year was 946.05

The time spent in hospital by each patient under treatment (omitting the patients in the Royal Hospital for Incurables) averaged 24.16 days.

Appendix.—Table No. 1 shows a list of diseases of patients treated in the several hospitals and the number that died of any particular disease during the year ended 31st March, 1901.

Table No. 2 shows the average cost per bed occupied throughout the year ending 31st March, 1901, for maintenance and for establishment, and for both, exclusive of buildings and furniture.

Table No. 3 shows the several sources of income of each hospital.

Table No. 4 sets forth in detail the chief heads of expenditure of each hospital.

Table No. 5 gives the number of patients treated in each hospital, the mortality per cent., the average daily number of beds occupied during the year, and the present extent of accommodation for each class of patients.

Table No. 6 shows the prices of articles supplied to each hospital per contract or otherwise.

Table No. 7 gives the various dietaries in use in each hospital.

Table No. 8 gives the names of the Governors of each hospital, and number of attendances during the year.

#### WESTMORLAND LOCK HOSPITAL.

This institution we found in a satisfactory condition as regards the comforts of the patients, and no complaint was made to us as to the want of attention on the part of attendants.

The cooking and the distribution of diets are conducted according to regulation. The quality of the food is good, and the returns and vouchers in connection with the expenditure are accurately kept.

Since our last inspection the whole of the interior of the hospital has been painted and renovated, and in addition the pictures which decorate the walls give colour and brightness to the surroundings.

With the object of preventing the spread of disease, we have always been of opinion that Lock Hospitals should be made as attractive to patients as possible, so that they might be induced to seek admission at the earliest stage of their disease and to remain under treatment till cured.

We were sorry to learn that during the past year twelve patients left the hospital against the advice of the surgeons, and that two patients were discharged for insubordination.

The festivities which the Governors permitted to take place last Christmas proved a great success. Every praise is due to the Matron for the great taste she displayed, and the time and trouble she spent in getting up the fancy dresses for the occasion. The patients are said to have taken the greatest interest and to derive amusement and pleasure from this entertainment.

We should be pleased to see a greater variety of books of a secular character and some illustrated papers supplied—such literature would tend to relieve the monotony of hospital life, and no doubt would have a beneficial influence on the inmates.

The recommendation made in a previous Report as to the necessity of providing a sterilizer and other apparatuses for preparing aseptic dressing has been carried out.

We also observed that arrangements for the medical examination of patients on their admission are improved, which must impress them that they are to be carefully treated—a matter of great importance in preventing distrust and in reconciling them to detention in hospital.

It is abundantly evident that the able and efficient surgical staff devote constant attention to every patient, and that the Matron appears to be unremitting in discharging her onerous duties, and continues to exercise a judicious avoidance of irksome discipline in the management of the inmates.

We have been informed that it is under the consideration of the Governors to improve the laundry by the enlargement of the windows, which would give more light and air; and also to have the walls re-coloured, and the surface smoothed so as to avoid the collection of dust.

The bath in the admission room should be replaced by a more improved pattern. We have invariably objected to iron baths as they require to be frequently painted, with the consequent inconvenience of turning off the water and disuse for the time.

We entirely concur in the recommendation of Dr. Courtney that a weighing machine should be procured for the weighing of patients on their admission and during their treatment.

There were 72 patients in this institution on the 1st April,

1900; 444 were admitted, and 10 infants were born in the house during the year; 453 were discharged; 4 died; and 59 remained on the 31st March, 1901.

The mortality was 0·87 per cent. on the total number treated to a termination.

The time spent in hospital by each patient averaged 48·50 days, and the average daily number of beds occupied during the year was 68·02.

#### STEEVENS'S HOSPITAL.

This hospital has every appearance of being under careful management, and we were much pleased with its condition on the occasion of our visit.

The wards are cheerful, bright, and well ventilated, and the beds and bedding were properly looked after. Satisfactory replies were given to us by the patients whom we interrogated on the subject of their fare, its cooking and service, and on the attention of the nurses.

We ascertained that each ward had an ample supply of rubber sheets, hand towels, expectoration cups, and foot warmers.

With regard to the financial returns, as furnished to this Board for the preceding year, and which appeared in our Forty-second Annual Report, the outlay on certain items, *e.g.*, provisions, stimulants, drugs, and medical and surgical appliances, appearing greatly in excess of the House of Industry Hospitals, which maintains on an average a much larger number of patients, we deemed it advisable to address a communication to the Governors on this subject, and we feel sure that they will give due consideration to this matter and use their best efforts to effect economy without lessening the comforts or interfering with the treatment of the patients.

We have ascertained that the efficient Matron is invariably present on the delivery of the provisions; she orders the meat from day to day, sees that it is of good quality, that the weight is correct and supplied according to contract.

The Dispenser orders the drugs that may be required, and which are supplied at contract prices, and the accounts are paid monthly. The lists and contract prices of drugs when required are submitted to a sub-committee of the medical staff, and means taken to assure the purity of the supplies before the contract is recorded. This arrangement, if carefully carried out, is calculated to control excessive expenditure.

Training of nurses forms a prominent feature in this institution, and there can be no question as to the value of systematic teaching of probationers; it cultivates the powers of observation, and enables them to discharge more efficiently their duties to the patients.

We inspected the Nurses' Home which has recently been constructed in connection with the hospital. The completeness of its arrangements, and the brightness and comforts of the accommodation it affords, have impressed us favourably.

A larger staff is now maintained for out-nursing, and the profits derived from that source has within the last few years reduced the cost of nursing patients within the hospital.

This satisfactory result is largely to be ascribed to the good management and energy of the Superintendent of Nurses, as well as to the valuable services rendered by the Hon. Secretary, Dr. R. A. Hayes.

In a former Report we expressed an opinion that this department should have its own funds disbursed apart from the accounts of the hospital; we were pleased to learn that effect has since been given to this recommendation.

The Resident Surgeon discharges his onerous duties with much zeal and ability; but we are still of opinion that it is worthy of consideration whether it would not be advisable to appoint a junior House Surgeon, so that in the absence of one qualified medical officer the other should remain on duty in the hospital. This officer could assist the Medical Staff in Pathological work, and in fully recording the history, condition, and course of treatment of certain cases, which could be carefully compiled to form a valuable record for future reference.

We wish to express satisfaction with the out-patients' department built within the last year, which merits special praise. It is planned with great skill and judgment; it is well lighted and ventilated, and cannot fail to be beneficial to the patients and to facilitate the working of the hospital.

On 1st April, 1900, 130 patients remained in hospital; 1,580 were admitted during the year; 1,514 were discharged; 70 died; and 126 remained at the close of the year.

The mortality was 4.42 per cent. on the total treated to a termination.

The time spent in hospital by each patient averaged 26.80 days, and the average daily number of beds occupied during the year was 117.23.

#### THE MEATH HOSPITAL.

The condition of this hospital on the day of inspection was satisfactory, the buildings being in good order, and the sewerage said to be effective.

The patients are carefully and skilfully treated, and as a school for clinical teaching, in which the most distinguished members of the medical profession have given their services, has since its foundation done valuable work.

The zeal and attention of the nursing staff throughout the year was praiseworthy, and the training of probationers has been steadily pursued with good results.

The wards are cheerful, sufficiently warmed and well aired, and are kept in excellent order. The beds and bedclothes were clean and tidy, but we observed that coloured quilts were in use. We have always advocated the use of white quilts, by which

arrangement the slightest soil is at once observed, and the immediate necessity of change indicated.

The Staff Nurse of each ward is provided with a stock-book, in which is entered every article under her immediate charge, recording the date when each article was supplied, lost, or broken.

The Superintendent of Nurses inspects and examines these books periodically, and affixes her initials at each inspection, the books being presented to the Board and checked by them every three months.

We ascertained there is ample provision for isolating patients afflicted by septic conditions, certain lung affections, or offensive cases likely to contaminate the air of a general ward.

The detached fever hospital is working satisfactorily both for its primary purpose and as a means of affording additional space in the general hospital by relieving a number of beds formerly occupied by infectious cases.

We inspected the recently reconstructed outdoor department. It is placed in a detached building, with separate entrance and exit. Physicians who are conversant with dispensary work will readily appreciate the advantage of the good ventilation and light which has been provided, for nothing can be more objectionable or insanitary than a crowded dispensary where patients with all kinds of disease are assembled.

There were 114 patients in this hospital at the commencement of the year; 1,311 were admitted; 1,239 discharged; 73 died; and 113 remained on the 31st March, 1901.

The mortality was 5.56 per cent. on the total number treated to a termination.

The time spent in hospital by each patient averaged 29.40 days, and the average daily number of beds occupied during the year was 98.52.

#### CORK-STREET FEVER HOSPITAL.

The management of this institution reflects credit on the Committee, who evidently have given careful and intelligent consideration to hospital arrangements.

The same care which we observed on previous visits with regard to the condition of the wards and the treatment of the patients was everywhere apparent.

We have ascertained that there is provision for the segregation of small-pox, typhus, measles, and scarlatina cases in separate wards or houses, each of which may be said to have its own staff of nurses and wardmaids, who all wear uniforms that can be and are frequently washed.

Amongst other recent improvements the following may be noted:—

Four large bow windows have been erected in the Recovery House, which improves much the appearance, ventilation, and light of each ward.

The bath-rooms have been fitted up with baths of the latest improved pattern, and are so arranged as to have the rooms suitably heated.

The interior of the house has been painted and done up, and all the sanitary arrangements overhauled.

The drying arrangements at the laundry have been improved by an ingenious utilization of the exhaust steam in addition to the existing hot air fan.

The dwelling-house has been papered and painted throughout.

Several of the nurses' bedrooms have been re-arranged so as to give each senior nurse a cubicle to herself.

At Beneavin the pleasure ground has been further improved, and the front gate has been sheeted, so that the patients cannot now approach the public road or overlook it.

The drainage of the entire hospital has been overhauled, and is in good working order.

We observed that the ambulance belonging to the hospital has been supplied with a new stretcher and a hot-water arrangement, so that patients may be carried with the utmost care and comfort.

Dr. White, Professor of Pathology to the Royal College of Surgeons, has been appointed Pathologist.

When the plague scare arose, the Committee, being alive to the great necessity of accurate diagnosis and immediate isolation, sent Dr. Day, their principal resident medical officer, to Glasgow to study that disease and specially note what precautions were taken to prevent its spread.

They obtained a supply of anti-plague serum from Paris, and detailed the necessary staff of nurses to attend specially the affected patients. Beneavin House was placed at the disposal of the Public Health Committee for the reception and treatment of such cases.

Arrangements were made to treat the dejecta, &c., in the same efficient manner in which it was dealt with in Glasgow.

We are glad, however, to report that no case has occurred in the city.

At the commencement of the year 131 patients remained in the hospital; 1,997 were admitted; 1,856 were discharged; 147 died; and 125 remained on the 31st March, 1901.

The mortality was 7.30 per cent. on those treated to a termination.

The average daily number of beds occupied, including Beneavin Convalescent House, was 147.58; and the time spent in hospital by each patient averaged 27.68 days.

#### HOUSE OF INDUSTRY HOSPITALS.

On inspection we found the several departments scrupulously clean and in order. The dietary seemed adequate, and no complaints were made to us on the subject of food, and the cooking appeared satisfactory.

The Matron and her staff of nurses devote assiduous attention to the requirements of the patients.

The medical care and treatment of the patients is marked by high professional ability, and the way in which the institution is administered has impressed us favourably.

From the records and vouchers that have come under our notice it is evident that great care is taken in making contracts, and that the goods supplied are carefully examined, so as to insure that they are equal to standard and not deficient in quantity.

We visited the laundry recently constructed to replace the former one; it is equipped with the most approved appliances to meet the increased requirements of the hospital.

We inspected with much pleasure the new Richmond Hospital, which is now complete, and since the 20th April last has been occupied. The Governors are to be congratulated on the liberality and enlightenment that they have shown in all the arrangements relating to this new block, which is in every respect quite in accordance with what a surgical hospital ought to be.

We should now be glad to see the Medical Whitworth and Hardwicke blocks taken in hands for such renewals or improvements as may be necessary. A beginning has been made in the Whitworth by the erection of a much-needed sanitary block at the end of the female wards, and we understand that a similar annexe is to be proceeded with at once on the male side. When the wards at present unoccupied in consequence of the necessary alterations shall have been re-opened and some structural renovation shall have been made, the Whitworth block will be in a satisfactory condition.

The Hardwicke Fever Hospital continues to perform in an efficient manner the work for which it was founded; we are, however, of opinion that there is not sufficient accommodation for the nurses attached to this hospital. They at present occupy the auxiliary block, which might at any moment be required for an outbreak of small-pox or other imported epidemic. In such an event the nursing staffs would probably have to be increased, while the accommodation for them would necessarily be diminished.

As to sanitation, there are many modern improvements which might with advantage be effected in this hospital; we understand, however, that the Board of Governors intend to proceed at once with a thorough reconstruction of the sanitary and heating arrangements. It would also be a great advantage to the convalescents to have a balcony constructed along the south front of the hospital, so as to permit them to have access to the fresh air from the wards.

The mortuary in use for the three hospitals is in too close proximity to the public road; its position should be changed when opportunity permits, and re-arranged, so as to show respect to the feelings of the friends of the deceased patients.

We wish also to suggest that the Pathological Department, so necessary as a means for scientific research, should be much more in accordance with modern views.

## HARDWICKE FEVER HOSPITAL.

Twenty-six patients remained in the Hardwicke Hospital on 1st April, 1900; 588 were admitted; 536 were discharged; 40 died; giving a mortality of 6·94 on the total treated to a termination.

The average daily number of beds occupied during the year was 44·82, and the time spent in hospital by each patient under treatment 27·59 days.

## WHITWORTH MEDICAL HOSPITAL.

On the 1st April, 1900, 38 patients remained in the Whitworth Hospital; 513 were admitted; 462 were discharged; 41 died; giving a mortality of 8·15 per cent. on the total number of cases treated to a termination.

The average daily number of beds occupied was 38·81, and the time spent in hospital by each patient under treatment 25·22 days.

## RICHMOND SURGICAL HOSPITAL.

There were 61 patients in the Richmond Hospital when the year commenced; 759 were admitted; 725 were discharged; 43 died; giving a mortality of 5·59 per cent. on the total treated to a termination.

The average daily number of beds occupied was 56·41, and the time spent in hospital by each patient averaged 18·41 days.

## ROTUNDA LYING-IN HOSPITAL.

This institution continues to be maintained in a high state of efficiency. The patients are carefully and kindly treated, and the several articles of food which we examined were of good quality.

The large number of male and female pupils, which come from all parts of the world, attest the high reputation it enjoys as a school for obstetrics and gynaecology. The Master has recently secured the services of Dr. Earl to give microscopic demonstrations of the various pathological specimens removed from time to time by operation.

Matters affecting the comforts of the nurses have received careful consideration.

We observe that the interior of the Auxiliary Hospital has been painted and decorated, which adds much to its general appearance.

So many internal improvements have been carried out in this department, that it may now be reckoned equal to anything of its kind in the United Kingdom.

The condition of the buildings is said to be satisfactory; but in reply to our usual question, as to whether any insanitary con-

dition or nuisance existed in the neighbourhood, we were informed that a lane in the vicinity of the hospital, and in charge of the Corporation, needed the attention of the Cleansing Department. The Governors of the hospital have appealed to the Corporation in vain to extend for a short distance the wood pavement in front of the hospital. There can be no doubt that this improvement would be a great boon to the patients, and we feel sure if a further application be made to the authorities, effect will be given to this recommendation.

On the 1st April, 1900, there were 50 patients in the labour wards; 1,894 were admitted during the year; 267 were discharged not having been delivered; 6 died; and 36 remained in the hospital at the end of the year.

Fifteen patients remained in the auxiliary or chronic department on the 1st April, 1900; 519 were admitted; 499 were discharged; 8 died in the year ended 31st March, 1901, and 27 then remained.

The average daily number of beds occupied throughout the year by labour cases was 44.87, and that by the chronic class was 26.17.

The time spent in hospital by labour cases averaged 8.50 days, and that by the chronic class was 19.60 days.

The mortality in the labour wards—deducting the non-parturient cases—was 0.36 per cent., and that by the chronic class was 1.57.

#### COOMBE LYING-IN HOSPITAL.

When we visited this hospital the entire interior was being painted and decorated.

A granolithic floor was being laid down in the out-patients' dispensary, and so constructed that the water used in cleaning the floor can be easily carried off.

The wards were in good order, and the comforts of the patients were well looked after.

We have ascertained that the most careful antiseptic precautions are adopted for the safety of the patients, and that the blankets used in the labour wards are frequently removed for purification previous to being re-issued; a precaution of the utmost importance, as all woollen fabrics saturated with organic emanations are likely to prove dangerous to parturient women.

It is gratifying to be able to report on the efficient way in which the hospital is worked, and the care with which each case is studied, and the attention that is bestowed on every detail of treatment.

As a school for giving instruction in midwifery and diseases peculiar to women, it continues to hold a high reputation, and attracts a large number of students from all parts of the country.

On the 1st April, 1900, there were 7 patients in the labour wards; 615 were admitted during the year; 175 were discharged not having been delivered; 3 died; and 16 remained in the hospital at the end of the year.

Eleven patients remained in the auxiliary or chronic department on the 1st April, 1900; 197 were admitted; 190 were discharged in the year ended 31st March, 1901, 3 died, and 15 then remained.

The average daily number of beds occupied throughout the year by labour cases was 13.75, and that by the chronic class was 13.21.

The mortality in the labour wards, deducting the non-parturient class, was 0.69 per cent, and that of the chronic class 1.44 per cent.

#### THE ROYAL HOSPITAL FOR INCURABLES.

We are happy to report that this hospital continues to deserve the favourable comments we have made in former Reports as to its general administration.

The Governors appear to do all that is possible to promote the comfort of the patients.

The wards were properly heated and well aired.

The various samples of food were of good quality, and the distribution of diets and extras were conducted satisfactorily.

The supply of linen, we were informed, is ample, and the soiled articles, which are removed to the laundry from the Cancer and Consumption Wards, are steeped and washed separately, and afterwards, as far as possible, dried and exposed in the open air, with the object of thoroughly removing organic taints.

The grave character of the cases admitted is indicated by the high rate of mortality.

During the past year the entire system of heating has been altered, at a cost of £900, and the new arrangements continue to act satisfactorily—proper temperature being maintained in the wards and corridors.

Considerable progress has been made with the building of the Nurses' Home, and the Governors hope it will be ready for occupation by July next. The accommodation provided is to consist of six separate bedrooms and eighteen cubicles in three other separate rooms, and in addition, two dayrooms of moderate size, box-room, bath-rooms, and the necessary sanitary accommodation.

Two hundred and seven patients remained in hospital on the 1st April, 1900; 9 were discharged, resigned, or went out on pension; 42 died during the year; and 202 remained on the 31st March, 1901.

The time spent in hospital by each patient averaged 283.50 days.

The average daily number of beds occupied throughout the year was 208.66.

#### THE ROYAL VICTORIA EYE AND EAR HOSPITAL.

This institution continues to do good work, notwithstanding the structural defects of the buildings, which must limit to a great extent the sphere of its operations. Although no death has occurred during the year, imperfect ventilation and overcrowding must lower the vitality of patients, retard their recovery, and hazard the result of surgical operations.

We were glad to be informed that a site has been selected on the Adelaide-road, with ample space for the new hospital, and that plans have been completed and approved of by the Council of the hospital, and it is hoped that building operations will commence early this year, and that the accommodation will be sufficient to meet future requirements. The impression produced by our visit was that this institution was conducted with great energy, ability, and earnestness.

On the 1st April, 1900, 59 patients were in hospital; 1,138 were admitted during the year; 1,143 were discharged; and 54 then remained.

The average daily number of beds occupied during the year was 68.00, and the time spent in hospital by each patient averaged 23.20 days.

No death occurred in the hospital during the year.

We have the honour to be

Your Excellency's obedient, faithful servants,

POWERSCOURT, *Chairman.*

Breakfast at Half-past Eight o'clock, Dinner at Half-past One o'clock, Supper at Six o'clock.

## DIETARY FOR NURSES AND SERVANTS.

Ten, . . . . .	½ lb. per week.
Sugar, . . . . .	1 lb. "
Bread, . . . . .	3 loaves (2 lb. loaves).
Butter, . . . . .	½ lb.
Potatoes, . . . . .	1 lb. daily.
Vegetables, . . . . .	3 times per week.
Meal, . . . . .	½ lb. of meal or bacon daily, without bone.
Milk, . . . . .	7 pint each daily.
Eggs, . . . . .	2 on Friday for dinner.
Butter, . . . . .	2 oz. "

## ROYAL VICTORIA EYE AND EAR HOSPITAL.

Breakfast.	Dinner.	Supper.
Bread and Butter, 8 oz.  Tea, with Milk and Sugar, 1 pint.	On Sunday and Wednesday—Roast mutton, with vegetables (turnips or cabbage), and potatoes.  On Monday and Saturday—Roast beef or stewed beef occasionally with soup, vegetables, and potatoes.  On Tuesday—Boiled bacon and cab- bage and potatoes.  On Thursday—Roast beef, with potatoes and turnips.  On Friday—Fish and potatoes.  Bread each day as required; many of the patients do not care to take any.	Bread and butter.  Tea, with milk and sugar.

Breakfast at 8 o'clock, A.M.; dinner at 1.30 o'clock, P.M.; supper at 5.30 o'clock, P.M.

Eggs and extra Milk, Beef Tea, &c. supplied when necessary, if the patient is debilitated, or too old or too young for the ordinary diet.

The system of preparing a set diet for each patient was abandoned some years ago as it was found to result in a good deal of waste. Now each patient gets as much as he or she craves to eat, and there is practically no waste at meals.

## FORMULARIES.

DUBLIN CASTLE,

*3rd July, 1901.*

Sir,

I have to acknowledge the receipt of your Letter of the 1st instant, forwarding, for submission to His Excellency the Lord Lieutenant, the Forty-third Annual Report of the Board of Superintendence of the Dublin Hospitals.

I am, Sir,

Your obedient Servant,

D. HARREL

The Secretary,

Board of Superintendence of

Dublin Hospitals,

35, Dawson-street.
